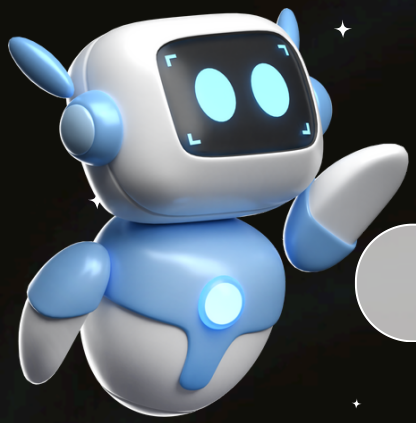
Tailwind CSS
Custom Styling



@Duanoor

Use case :-

Suppose you want to add a HEX color to a text also you don't want to create a separate CSS file for just one style.

We can add the color in the tailwind.config.js and use it anywhere just like using utility classes

tailwind.config.js > default

```
/** @type {import('tailwindcss').Config} */
export default {
    content: [
        "./index.html",
        "./src/**/*.{js,ts,jsx,tsx}",
    ],
    theme: {
        extend: {},
    },
    plugins: [],
}
```

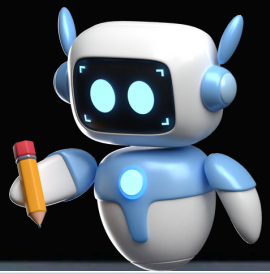
@Duanoor

we want to extend **colors** property

extend the tailwind classes

```
    ],
    theme: {
        extend: {
            colors:{
                primary:'#124585',
                secondary:'#744ar69'
            }
        },
    },
    plugins: [],
}
```

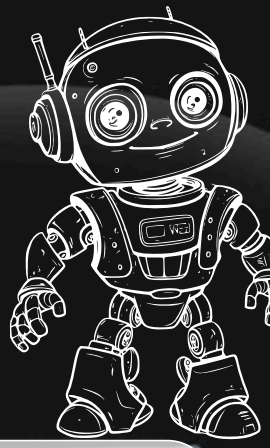
key and value



@Duanoor

Usage in JSX

```
  return (
    <>
      <h1 className='text-primary'>This is heading</h1>
    </>
  )
}
```



CSS

@Duanoor

Similarly

```
/** @type {import('tailwindcss').Config} */
export default {
  content: [
    "./index.html",
    "./src/**/*.{js,ts,jsx,tsx}",
  ],
  theme: {
    extend: {
      colors: {
        primary: '#1a73e8',
        secondary: '#ff5722',
      },
      spacing: {
        '72': '18rem',
        '84': '21rem',
        '96': '24rem',
      },
      borderRadius: {
        '4xl': '2rem',
      },
    },
  },
  plugins: [],
}
```

Colors extend

extend spacing, width or height

border radius extend

@Duanoor

margin on
x axis **auto**

padding
1.5 rem

max-width
24 rem

background
color **white**

border - radius
4xl (2 rem)

```tsx
return (
  <>
    <div className="p-6 max-w-sm mx-auto bg-white rounded-4xl
    shadow-md space-y-4">
      <h2 className="text-primary font-bold text-2xl">Hello
      Tailwind!</h2>
      <p className="text-secondary">This is an example of
      extended TailwindCSS classes.</p>
      <div className="h-72 bg-primary rounded-lg"></div>
    </div>
  </>
)
```

height
18 rem
